Summary of CFN #486 panel discussion. The quotes below are statements directly from the panelists on the show; click the link above to watch the full episode!

5 Lessons Traders Can Learn from the Market's Record Highs

1. **Don't Fight the Trend**
   When markets push to all-time highs, many traders are tempted to call a top. Yet history shows that strength often begets more strength. Instead of betting against the tide, focus on identifying whether momentum is slowing or continuing.
   "You don't want to be the person stepping in front of a freight train. Respect the trend until it proves otherwise."

2. **Watch for Bearish Divergences**
   Technical tools like oscillators can reveal when momentum is fading, even as prices climb. A divergence between price action and momentum doesn't mean the trend is finished, but it does highlight increased risk.
   "The market's making new highs, but fewer stocks are participating—that's a red flag."

3. **Use Fibonacci and Elliott Wave Analysis**
   Key retracement and extension levels often mark turning points or continuation zones. After a pullback, identifying Fibonacci zones can help forecast the next wave of movement with surprising accuracy.
   "The Fibonacci extensions line up perfectly with the Elliott count here, and that's not coincidence."

4. **Wait for Confirmation Before Buying Dips**
   In strong markets, pullbacks are inevitable, but not all dips are worth buying. Patience is critical. Look for signs of support holding and confirmation that momentum is resuming before entering.
   "Buying every dip works until the one that doesn't—wait for confirmation."

5. **Balance Opportunity with Risk Awareness**
   Record highs often bring heightened emotions. While the potential for gains is real, so is the risk of sharp corrections—especially around key earnings announcements or macroeconomic events. Discipline is essential.
   "This isn't about chasing—this is about protecting capital while still letting winners run."

[BONUS] Every week the **Stock Watchlist Weekly algorithm** analyzes thousands of stocks for both technical and fundamental positive indicators for high-probability, index-beating gain potential, for both short term trader and long-term investor watchlists (with a focus on no-dividend or low-dividend growth-focused stocks).

The algorithm is limited to assessing substantial public companies: NYSE or NASDAQ listed; highly liquid; optionable; share price under $500.

This algorithm is used to generate picks each week through the Stock Watchlist Weekly Newsletter.
