This list was generated using most of the same parameters of the typical weekly Stock Watchlist Weekly algorithm lists with one major additional filter: It was limited to the special parameters described on the next page.

But otherwise, as usual, the stocks must be NYSE or NASDAQ listed; highly liquid; optionable; share price $3-$500.

This algorithm is used to generate picks each week through the Stock Watchlist Weekly Newsletter (click for 30-days FREE).

## 💡 Why These Stocks May Deserve a Spot in Your Portfolio:

Did you know that over the last 15 years the QQQ went up 100% of the time between June 26th and July 21st? The max gain was 10.7% and the average was 4.5%.

Of course there's no guarantee that trend will hold but this strong seasonal trend provides a good opportunity for a new SWW special report…

For this report, we ran an adjusted version of the Stock Watchlist Weekly Algorithm to select only for NASDAQ100 stocks who are statistically best positioned for market-beating upside over the next month.

The Stock Watchlist Weekly algorithm is an objective process created to analyze thousands of stocks for both technical and fundamental positive indicators and deliver a list of the the best stocks for high-probability, index-beating gain potential, for both short term trader and long-term investor watchlists.
